

**Question**  
After smoking marijuana, where does it go in the body?

**Answer**  
Marijuana is fat soluble. The THC in marijuana is stored in the fatty organs of the body, such as the brain, lungs, and reproductive system.

**Question**  
Do most young teens smoke, drink or use pot?

**Answer**  
NOR Recent studies indicate that 8th graders report the following use during a typical month - marijuana 6.4%, tobacco 9.2%, alcohol 18.6%

EM

**Question**  
Is today's pot stronger than the pot the hippies smoked?

**Answer**  
Yes, today's marijuana is much stronger than the marijuana smoked in the 1960s and 1970s. The psychoactive ingredient in a marijuana cigarette is the THC content. Several decades ago, the THC averaged ½-1%. Today marijuana has a THC content of 6-7%, and some "joints" have THC in the 8-12% range.
